EXERCISE-16

PROCEDURES AND FUNCTIONS

PROCEDURES

DEFINITION

A procedure or function is a logically grouped set of SQL and PL/SQL statements that perform a specific task. They are essentially sub-programs. Procedures and functions are made up of,

- Declarative part
- Executable part
- Optional exception handling part

These procedures and functions do not show the errors.

KEYWORDS AND THEIR PURPOSES

REPLACE: It recreates the procedure if it already exists.

PROCEDURE: It is the name of the procedure to be created.

ARGUMENT: It is the name of the argument to the procedure. Paranthesis can be omitted if no arguments are present.

IN: Specifies that a value for the argument must be specified when calling the procedure ie. used to pass values to a sub-program. This is the default parameter.

OUT: Specifies that the procedure passes a value for this argument back to it's calling environment after execution ie. used to return values to a caller of the sub-program.

INOUT: Specifies that a value for the argument must be specified when calling the procedure and that procedure passes a value for this argument back to it's calling environment after execution.

RETURN: It is the datatype of the function's return value because every function must return a value, this clause is required.

PROCEDURES – SYNTAX

create or replace procedure procedure name> (argument {in,out,inout} datatype) {is,as}
variable declaration;
constant declaration;
begin
PL/SQL subprogram body;
exception
exception PL/SQL block;
end;

FUNCTIONS – SYNTAX

create or replace function <function name> (argument in datatype,.....) return datatype {is,as} variable declaration; constant declaration; begin

PL/SQL subprogram body; exception exception PL/SQL block; end;

CREATING THE TABLE 'ITITEMS' AND DISPLAYING THE CONTENTS

SQL> create table ititems(itemid number(3), actualprice number(5), ordid number(4), prodid number(4));

Table created.

SQL> insert into ititems values(101, 2000, 500, 201); 1 row created.

SQL> insert into ititems values(102, 3000, 1600, 202); 1 row created.

SQL> insert into ititems values(103, 4000, 600, 202); 1 row created.

SQL> select * from ititems;

ITEMID	ACTUALPRICE	ORDID	PRODID
101	2000	500	201
102	3000	1600	202
103	4000	600	202

PROGRAM FOR GENERAL PROCEDURE – SELECTED RECORD'S PRICE IS INCREMENTED BY 500 , EXECUTING THE PROCEDURE CREATED AND DISPLAYING THE UPDATED TABLE

SQL> create procedure itsum(identity number, total number) is price number;

- 2 null_price exception;
- 3 begin
- 4 select actualprice into price from ititems where itemid=identity;
- 5 if price is null then
- 6 raise null price;
- 7 else
- 8 update ititems set actualprice=actualprice+total where itemid=identity;
- 9 end if;
- 10 exception
- 11 when null price then
- 12 dbms output.put line('price is null');
- 13 end;
- 14 /

Procedure created.

SQL > exec itsum(101, 500);

PL/SQL procedure successfully completed.

SQL> select * from ititems;

ITEMID	ACTUALPRICE	ORDID	PRODID
101	2500	500	201

102	3000	1600	202
103	4000	600	202

PROCEDURE FOR 'IN' PARAMETER - CREATION, EXECUTION

SQL> create procedure yyy (a IN number) is price number;

2 begin

3 select actualprice into price from ititems where itemid=a;

4 dbms_output.put_line('Actual price is ' || price);

5 if price is null then

6 dbms_output.put_line('price is null');

7 end if;

8 end;

9 /

Procedure created.

SQL> exec yyy(103);

Actual price is 4000

PROCEDURE FOR 'OUT' PARAMETER - CREATION, EXECUTION

SQL> set serveroutput on;

PL/SQL procedure successfully completed.

SQL> create procedure zzz (a in number, b out number) is identity number;

2 begin

3 select ordid into identity from ititems where itemid=a;

4 if identity<1000 then

5 b:=100;

6 end if;

7 end;

8 /

Procedure created.

SQL> declare

2 a number;

3 b number;

4 begin

5 zzz(101,b);

6 dbms output.put line('The value of b is '|| b);

7 end;

8 /

The value of b is 100

PL/SQL procedure successfully completed.

PROCEDURE FOR 'INOUT' PARAMETER - CREATION, EXECUTION

SQL> create procedure itit (a in out number) is 2 begin 3 a:=a+1; 4 end; 5 /

Procedure created.

```
SOL> declare
2 a number:=7;
 3 begin
4 itit(a);
 5 dbms output.put line('The updated value is '||a);
 6 end;
 7 /
The updated value is 8
```

PL/SQL procedure successfully completed.

CREATE THE TABLE 'ITTRAIN' TO BE USED FOR FUNCTIONS

SQL>create table ittrain (tno number(10), tfare number(10)); Table created.

SQL>insert into ittrain values (1001, 550); 1 row created.

SQL>insert into ittrain values (1002, 600); 1 row created.

SQL>select * from ittrain;

TNO	TFARE
1001	550
1002	600

PROGRAM FOR FUNCTION AND IT'S EXECUTION

SQL> create function aaa (trainnumber number) return number is

- 2 trainfunction ittrain.tfare % type;
- 3 begin
- 4 select tfare into trainfunction from ittrain where tno=trainnumber;
- 5 return(trainfunction);
- 6 end;
- 7 /

Function created.

SQL> set serveroutput on;

```
SQL> declare
```

- 2 total number;
- 3 begin
- 4 total:=aaa (1001);
- 5 dbms output.put line('Train fare is Rs. '||total);
- 6 end;
- 7 /

Train fare is Rs.550

PL/SQL procedure successfully completed.

Program 1

FACTORIAL OF A NUMBER USING FUNCTION

```
CREATE OR REPLACE FUNCTION factorial

(n IN NUMBER) RETURN NUMBER IS

result NUMBER := 1;

BEGIN

IF n < 0 THEN

RETURN NULL;

END IF;

FOR i IN 1..n LOOP

result := result * i;

END LOOP;

RETURN result;

END;

Function FACTORIAL compiled

/

Elapsed: 00:00:00.012
```

Program 2

Write a PL/SQL program using Procedures IN,INOUT,OUT parameters to retrieve the corresponding book information in library

```
CREATE OR REPLACE PROCEDURE get book info(
 p_book_id IN NUMBER,
 p title OUT VARCHAR2,
              OUT VARCHAR2,
 p author
 p copies IN OUT NUMBER
) IS
BEGIN
 SELECT title, author, copies INTO p_title, p_author, p_copies
 FROM library books
 WHERE book_id = p_book_id;
EXCEPTION
 WHEN NO DATA FOUND THEN
   p title := 'NOT FOUND';
   p author := 'NOT FOUND';
   p_copies := 0;
                              Title: Oracle PL/SQL Programming
                               Author: Steven Feuerstein
END;
                               Copies available: 4
SET SERVEROUTPUT ON;
                               PL/SQL procedure successfully completed.
DECLARE
 v book id NUMBER := 1;
                               Elapsed: 00:00:00.015
 v title VARCHAR2(100);
 v author VARCHAR2(100);
 v copies NUMBER := 0;
BEGIN
 get book info(v_book_id, v_title, v_author, v_copies);
 DBMS OUTPUT.PUT LINE('Title: ' | | v title);
 DBMS OUTPUT.PUT LINE('Author: ' || v author);
 DBMS OUTPUT.PUT LINE ('Copies available: ' | | v copies);
END:
```
